

LENDING PIT INTRADAY

In fast moving markets, timing is everything!

Securities lending is moving faster than ever before. In just a few hours, market sentiment regarding a security can change completely. Securities can go from being plain vanilla issues to hot stocks that are in high demand, and vice versa. Stock prices can spike, creating risky short squeezes.

Traditionally, intraday movements are hard to predict and harder to capitalize on. Without timely, accurate data, traders and management are forced to make big calls on limited knowledge.

Now, for the first time, SunGard brings you same-day securities lending data.

Lending Pit Intraday now gives you the most up-to-date rate and volume information on securities lending transactions globally. Exclusive to SunGard clients, Lending Pit Intraday offers unprecedented timeliness and accuracy to power better decision-making. The result? More profit: less risk.

Key Benefits

- Continuous, updated information during the most crucial times of day: before market open, returns, and drops.
- Watch stocks move – adjust strategies in real time.
- Maximize opportunities and spot securities as they become hot.
- Reduce risk by predicting stocks with potential recalls.
- Make sure supply/demand channels are available and rebates/fees are appropriate.

The Lending Pit Data

Lending Pit provides current and historical data for over 44,500 equity and fixed income securities across all markets. The Lending Pit database contains data for over 32,000 lending portfolios: over 1.5 million transactions daily or \$2.1 trillion on loan each day, across 115 countries.

Key Features:

- Updated 24 hours a day: As soon as we receive data, we publish it on Lending Pit.
- Security level data refreshed as often as every 20 minutes in some markets.
- New rebates and fees: average, low, and high rates for today's trades.
- New volume: total number of new shares lent and borrowed in the day.
- Recalls & returns: percentage of yesterday's loan volume returned or recalled today in specific markets.
- Changes highlighted to reflect new levels.
- Information displayed at the top of the screen, highlighting key insights.
