

AMBIT ASSET FINANCE FOR FACTORING & TRADE FINANCE

Factoring and trade-based finance has grown more complex, yet many financial institutions have struggled to keep up with advancements, as they continue to rely on systems that are disparate, outdated and unable to support innovation. This often makes it impossible for financial institutions to truly advance their operations because of fragmented processes and inefficient reporting capabilities. Companies, therefore, that are looking to reduce costs, while also driving their businesses forward, have technology at the heart of their objectives.

SunGard can help. We understand that each business is unique. SunGard's Ambit Asset Finance is an intelligent, single-platform, end-to-end software solution for the factoring and trade finance industries. This solution offers a holistic approach to finance activities, by leveraging the latest technology to provide the most configurable, scalable system on the market.

Lower Operating Costs

In the unique areas of factoring and trade finance, it is important to have the tools necessary in order to accurately predict consumer demand. One step in accomplishing this task is to maintain a sufficient amount of visibility and control over your operations.

The costs associated with maintaining a number of disparate applications pose a large financial burden. Removing legacy systems that are no longer supported or threaten operational risk due to collapsing infrastructure, and instead implementing a single, Web based solution, means that

institutions can reduce total cost of ownership (TCO) and mitigate risk of a pending implosion of technology. Ambit Asset Finance can help lower your operating costs by providing you with a single, centralized solution that can reduce cost per transaction.

Improved Decision Support

It is important for factoring and trade finance professionals to have a true picture of their markets, so they are able to respond to fluctuations promptly and with ease. Ambit Asset Finance provides centralized access to information about a client's transactions, which can be accessed by relevant employees within the organization. The solution offers users complete visibility of financial data flows across the entire business.

Remain Aligned with Regulations

The Ambit Asset Finance solution allows companies to eliminate legacy systems and automate previously manual processes and minimize operational errors. As a result, reporting is comprehensive and available in real-time.

Proven Value

SunGard has a 20-year proven track record of delivering financial services solutions across the globe, and the Ambit Asset Finance team has highly specialized industry knowledge and implementation experience, which sets them apart from the competition.

System Functionality:
