

AMBIT ASSET FINANCE FOR ASSET FINANCE

Asset finance has grown more complex, yet the systems used to support this business are often fragmented, outdated and unable to support innovation. Working with disparate systems leads to fragmented processes and reporting capabilities.

Many asset finance organizations have created their own solutions or joined together inherited and disparate legacy systems hoping to minimize the amount of manual processing required, but this can lead to problems, such as poor visibility and a high level of operational and credit risk.

Organizations looking to improve operational efficiency, while still driving their businesses forward, have technology at the heart of their objectives. The importance of automation and workflow is clear when costs are driven down and margins protected through accurate delivery of process controls.

Ambit Asset Finance is an intelligent, single-platform, end-to-end software solution for the asset finance industry. The solution provides a holistic approach to your asset finance activities. By leveraging the latest technology, Ambit Asset Finance provides a highly configurable, scalable system for the market.

Technology Aligned with Your Needs

Businesses that invest in Ambit Asset Finance are able to manage the entire end-to-end asset finance lifecycle for a diverse portfolio, including heavily structured leases. The solution supports multi-currency transactions and is

used in global environments with multiple origination centers and is able to handle complex agreements to provide a micro-level picture in real-time.

Integration & Scalability

Ambit Asset Finance is a truly advanced system offering fully integrated, end-to-end support for asset finance, including the configurability and scalability that organizations require in today's fast-moving market. By utilizing the latest Microsoft.Net technology, the solution offers a business model that delivers cost benefits and direct business value. The result for our customers is the ability to manage complex business data in a safe and effective manner.

Lowered Operating Costs

Removing outdated legacy systems that are no longer supported, or that pose operational risk due to collapsing infrastructure, and instead implementing a single, Web based

solution mean companies can reduce Total Cost of Ownership (TCO) and mitigate the risk of an implosion of technology. Many asset finance businesses rely on manual data entry and processing, however by leveraging data consolidation, automation and workflow technology, these businesses can reduce costs, improve response time and make room for more strategic application of resources.

System Functionality:

- Full relationship/contract lifecycle management
- Sales support (including branch/dealer access)
- Quotation management and financial modeling
- Tax based pricing
- Credit scoring/risk management
- Credit line/limit management
- Asset lifecycle management
- Residual value management
- Billing and invoicing
- Collections/litigation
- Document generation and management
- Early/partial termination, extensions, restructures/reschedules
- CRM
- Vendor relationship management
- Purchase receivables support
- Commissions and subsidies
- Fee income
- Administration
- Integrated accounting
- Reporting

Key Challenges:

- High cost of ownership and maintenance
- Disparate legacy systems
- Inefficient manual processes
- Inadequate decision support
- Compliance with regulatory changes
- Lack of security and control
- Lack of global visibility

Ambit Asset Finance:

Software solution for end-to-end factoring and trade finance processing

Benefits:

- Low TCO
- Improved operational efficiencies
- Standardized business processes
- Improved cash and liquidity management
