

DISASTER RECOVERY SERVICE FOR CHECK PRINT

Customers trust SunGard to deliver a comprehensive range of payment processing and execution solutions. Whether it's supporting business as usual, or ensuring secure business continuity, SunGard is a trusted partner. For those customers who rely on AvantGard Secure32 to execute print and mail locally, SunGard can also provide disaster print capability for mission-critical payroll or accounts payable (AP) applications with AvantGard PayNetExchange.

AvantGard PayNetExchange is designed specifically for reliable payment execution, and is a perfect solution for companies looking for a proven disaster recovery option for print and mail. A Web-based application, AvantGard PayNetExchange enables secure execution of all payment types, including ACH, wires, payment cards and outsourced check printing. Prepared for the unexpected, our customers have peace of mind that SunGard stands ready to support their payroll and payables requirements.

How does it work? Customers send us a copy of their payment files each pay period. We receive that file and create PDF output that is available for review online, so you can validate that we can process the checks if required.

A Complete Solution For Your Disaster Recovery Needs

An all-inclusive payables service, AvantGard PayNetExchange securely processes your data and holds it until the next payment run. Your check files and forms are ready for print and mail at any time, from the same company that understands your internal payment needs.

Maintain Total Control

Maintain complete visibility into each file you send us with our online Web interface. You will receive an automated e-mail acknowledgement for each file. You are able to verify that we have processed the check file and simultaneously review sample output online at your convenience.

Bank Independent

No banking changes are needed, so you can maintain your important existing financial relationships. Checks can be written on one or multiple payment accounts.

Same Payment Process

No changes to your current process are needed. Your IT department can automatically export copies of your payment files to us to hold in case of an emergency.

Rapid Implementation

We can quickly set up your check applications within our system and complete the proper testing steps to validate that we are ready to print for you in the event of an emergency.

| Benefits | PayNetExchange |
|-------------------------|--|
| Online reporting tools | Every transaction is archived, secured and immediately accessible online 24/7 to your registered users, who can view, save and verify. We are able to process your payment files in the event of an emergency. |
| Overnight courier setup | Codes in your file allow us to sort your payroll or AP appropriately in the event you declare an emergency and send the checks out via an overnight courier if necessary. |
| SAS 70 Compliant | All of our processes and controls are audited annually by Ernst and Young. You can be confident that we can account for every payment you send us. |
| Reliable | All of our data processing and services are processed at SunGard redundant data centers located in Vorhees, New Jersey and Philadelphia, Pennsylvania. |
