

## FAME ENERGY SERVER 4

### **UNIQUE TIME-SERIES SYSTEM DESIGNED FOR ENERGY AND COMMODITIES DATA**

Fame Energy brings data from around the world right to your desk. Speed and accuracy of information are critical to effective decision making. Energy Server 4 gives you the ability to aggregate data from multiple sources and present it across the enterprise, all within a consistent framework.

### OVERVIEW

Fame Energy Energy Server 4 is an open technology platform for the enterprise-wide consolidation, integration, and management of data for business applications. Designed specifically for energy and commodity data, Energy Server 4 is a time series system, which means better performance and smaller capacity requirements.

### POWERFUL CAPABILITIES

With a **time series database**, data retrieval times can be reduced 150% or more, when compared to the time needed to access a relational database. There is also a storage capacity advantage when using a time series database: storage requirements are 80% smaller when compared to a typical relational database storing the same data.

The time series server capabilities include a **powerful calculation engine**. With the ability to calculate forward curves, rolling averages, monthly roll-overs, and more, Energy Server 4 is the critical tool for turning data into decisions.

**Millisecond data** storage is an enhancement to the time series capability of Energy Server 4. With millisecond data, you can now test algorithmic trading scenarios, giving you a competitive advantage when building and testing automated trading systems.

**Data versioning** is another enhancement, one that makes compliance and auditing easier. Anytime data is changed, the system records who made the change, with a time stamp, and includes a field for comments. Access to the various data versions significantly simplifies auditing and compliance reporting.

### DEPLOYMENT OPTIONS

Recognizing that every client is unique, SunGard offers several deployment options from client installed and managed to a web-accessable ASP model.

### **SUNGARD ENERGY AND COMMODITIES**

SunGard's energy and commodities solutions help energy companies, corporate hedgers, hedge funds and financial services firms compete efficiently in global energy and commodities markets by streamlining and integrating the trading, risk management and operations of physical commodities and their associated financial instruments.
