

Business Intelligence and Decision Support

Overview

Through real-time proactive monitoring and the control of energy trading activities, Aligné Business Intelligence (BI) and Decision Support helps energy trading organizations to more effectively manage risk, optimize decisions and increase revenues. Aligné's advanced integration framework supports an energy domain data mart bringing together transaction data from functions across the suite. SunGard provides a set of reporting and BI tools that can be deployed against the common data model and database including advanced cubes. Dashboards may be used with real-time alerts and data feeds to deliver consolidated views, visual representations of the data and immediate, streaming updates to forecasts, real-time market data and projected performance metrics.

Features

Aligné BI and Decision Support offers many features including:

- Provides the ability to view correlated data from existing energy trading systems and external data sources through a real-time streaming dashboard
- Permits just-in-time decision-making to change the outcome of a transaction that may still be in flight, before the transaction has been completed
- Monitors trading, risk and operational metrics continuously
- Alerts traders and schedulers of exception conditions as they occur
- Allows organizations to establish trader limits across multiple criteria and links to external instrumentation valuation models and methods

Benefits

Aligné BI and Decision Support provides companies with numerous benefits such as:

- Increases profits and minimizes risks through real-time visibility to forecasts, market data and business performance
- Gives traders the most current view of how the business is performing at any given moment in time
- Helps traders monitor contract positions and residuals, spot market prices and project profit and loss
- Helps you to increase customer satisfaction and customer retention
- Protects revenue streams through more effective real-time management of positions and transport utilization

SunGard — Solutions for Energy

SunGard's energy solutions help energy companies, industrials and financial services, to efficiently compete in global energy markets by streamlining and integrating the trading, risk management and operations of physical commodities and their associated financial instruments. These solutions provide front to back-office support for capturing deals, delivering market data for valuation, clearing and reconciliation of transactions, invoicing and accounting for transactions, analysis and management of risk, and physical transmission or delivery of commodities. SunGard Energy Solutions also support the logistics and inventory of fuels used in producing power and industrial products.
