

GL Win is a fast, robust, multi-asset trading station that provides complete order life-cycle management, innovative order sending and monitoring features, and real-time P&L calculation. The workstation is a worldwide industry standard, deployed by more than 1,000 client organizations.

Integrated with SunGard Global Trading's world-leading range of market gateways and the GL Net community of over 300 brokerage firms, GL Win delivers the widest possible range of trading options to its users.

ADVANCED EXECUTION: TAKING IT FURTHER

GL Win Advanced Execution (GL Win AE) builds on the GL Win workstation, incorporating the same flexible interface and function-specific windows, plus additional premium components:

- Market Watch Plus
 - SpreadMatrix
 - Order Book and Trading Watch
 - QuickTrade
 - P & L Calculation
 - Combo Trader
 - Open GL Win
 - GL XLS
- } GL Win AE components

2 - Fill the quantity and price.

1 - Select the Combo you want to trade.

3 - Choose either Sniper or Stalker mode.

4 - Monitor fills of your Combo order in the Order Book

GL Win AE screen: Multi-market spread trading using Combo Trader

Market Watch Plus

Various views of market data can be built with Market Watch Plus, selecting instruments for each instance from GL Win's Data Dictionary. A dedicated Options window covers all puts and calls on an underlying instruments.

SpreadMatrix

This dedicated spread market data and trading module displays both market-published and calculated prices. Quantity ratio and price relationship may be configured for user-defined spreads. The Extended View includes butterflies and condors.

Order Book and Trading Watch

GL Win provides extensive help in managing orders: the trader can apply a range of filters (client, instrument, status, side etc.). In parallel, market messages for all trades and instruments can be tracked via the Trading Watch window.

QuickTrade

A key component of GL Win is this one-click trade/modify/cancel facility, using a vertical price ladder for full market depth. QuickTrade enables cash and derivatives traders to view working orders, traded volume and market depth from a single window.

Profit and Loss

P & L is calculated in real time. As with the Order Book, filters can be set to monitor by

clients, instruments or markets, and GL Win also offers the ability to build simulated positions. These capabilities allow for fully informed performance measurement and strategy adjustments at any time.

Combo Trader

Combo Trader enables brokers and proprietary traders to create, manage and execute multi-asset and cross-exchange spread trading strategies. Combo Trader's multi-legged functionality allows traders to generate multiple spreads quickly and easily, according to user-defined trading strategies, in order to achieve the best possible executions.

GL XLS

GL XLS is designed to enhance MS Excel's features with trading functionalities and accompanying tools. GL XLS transforms MS Excel into a powerful GL Win trading application, with one-click trading capabilities.

Open GL Win

By using a set of APIs, additional special-purpose GL Win components can be developed in-house and added to the GL Win interface. These unique components then communicate directly with existing GL Win components.
