

# SUNGARD GL WIN

Advanced Execution  
For Derivatives

GL Win is a fast, robust, multi-asset trading station that provides complete order life-cycle management, innovative order sending and monitoring features, and real-time P&L calculation. The workstation is a worldwide industry standard, with over 35,000 screens deployed by more than 1,000 client organizations.

Integrated with SunGard Global Trading's world-leading range of market gateways and the GL Net community of over 300 brokerage firms, GL Win delivers the widest possible range of trading options to its users.

## ADVANCED EXECUTION FOR DERIVATIVES

GL Win Advanced Execution for Derivatives (GL Win AED) builds on the GL Win workstation, incorporating the same flexible interface and function-specific windows as the original with additional premium components. The following GL Win and AED components illustrate the range of capabilities, and are described further overleaf.

- MarketWatch Plus
  - SpreadMatrix
  - Order Book & TradingWatch
  - QuickTrade
  - P & L Calculation
  - Combo Trader
  - Open GL Win
  - GL XLS
- } **GL Win AED components**

Example GL Win AED screen: Multi-market spread trading using Combo Trader

### MarketWatch Plus

Various views of market data can be built with MarketWatch Plus, selecting instruments for each instance from GL Win's Data Dictionary. A dedicated Options window covers all puts and calls on an underlying instrument.

### SpreadMatrix

SpreadMatrix is a dedicated spread market data and trading module that can display both market-published and calculated prices. Quantity ratio and price relationship may be configured for user-defined spreads. The Extended View includes butterfly and condor spreads.

### **Order Book and Trading Watch**

GL Win provides extensive help with the complex task of managing orders: the trader can apply a range of filters (client, instrument, status, side etc.). In parallel, market messages for all trades (including strategies) and instruments can be tracked via the Trading Watch window.

### **QuickTrade**

A key component of GL Win is this one-click trade/modify/cancel facility, using a vertical price ladder for full market depth. QuickTrade enables cash and derivatives traders to view working orders, traded volume and market depth from a single window.

### **Profit and Loss**

P & L is calculated in real time. As with the Order Book, filters can be set to monitor by clients, instruments or markets, and GL Win also offers the ability to build simulated positions. These capabilities allow for fully informed performance measurement and strategy adjustments at any time.

### **FX market connectivity**

SunGard Global Trading offers trading connectivity to several major FX ECNs: FX MarketSpace, HotspotFX, BAXTER-FX and FXCM. GL Win incorporates an FX Trading Window that provides high visibility for best bid and offer as well as market depth.

### **Combo Trader**

Combo Trader enables brokers and proprietary traders to create, manage and execute multi-asset and cross-exchange spread trading strategies. Combo Trader's multi-legged functionality allows traders to generate multiple spreads quickly and easily, according to user-defined trading strategies, in order to achieve the best possible executions.

### **GL XLS**

GL XLS is designed to enhance MS Excel's features with trading functionalities and accompanying tools. GL XLS transforms MS Excel into a powerful GL Win trading application, with one-click trading capabilities.

### **Open GL Win**

By using a set of APIs, additional special-purpose GL Win components can be developed in-house and added to the GL Win interface. These unique components then communicate directly with existing GL Win components.
