

INTRADER

Manage your own investment portfolio to maximize performance

Managing money is at the core of a financial institution's business. From profitably investing its own fund balances on a day-to-day basis to underwriting bonds and holding customer assets in safekeeping, the lifeblood of the firm is tracking and investing funds to its best advantage.

Yet most institutions trade on one system and perform portfolio tracking on a completely different platform. Investment changes are entered after the fact, often in batch mode – an error-prone process that virtually ensures that day-to-day portfolio reports are out-of-sync with a firm's actual portfolio positions.

The future belongs to financial institutions that can thrive in an environment of increased competition and an accelerated pace of business. Managing their own investment portfolio to maximize performance can be a key competitive strategy.

SunGard's InTrader solution offers today's competitive financial services firms advanced portfolio management and trading capabilities, helping them realize improved investment performance while streamlining operations.

A Web-based, fully integrated, straight-through system, InTrader goes far beyond simply tracking investments: it also includes trade processing and safekeeping functions, therefore addressing all investment management and reporting needs in a single system. Trades are automatically reflected throughout the system in real-time, eliminating redundant entries and errors while providing an accurate, up-to-the-minute picture of an investment portfolio for optimal decision making.

Trades are entered just once; trade execution, accounting, collateralization, performance monitoring, reporting and more are handled automatically. Even regulatory reporting is as simple as a point-and-click command.

InTrader features multi-level portfolio management and supports managed and correspondent portfolios. It also provides non-US dollar processing and generates regulatory compliance reports quickly and easily.

InTrader integrates with Stream Portal for InTrader (formerly known as Portal Solutions) for fast and secure electronic delivery of documents to authorized users at client firms. Its open architecture features ODBC-compliant access and multiple output formats.

A leading system for integrated capital markets portfolio management, safekeeping, funding and trading, InTrader gives institutions new power to manage their own investments and provide improved service to clients and correspondent institutions.

KEY FEATURES OF INTRADER:

Paperless trading and funding

Transactions are entered through a Web-based interface and are automatically accounted for, cleared, settled and delivered to the custodian. To maximize productivity, InTrader lets traders and salespeople execute transactions with minimal data entry.

- Provides direct links to depositories and custodian banks for true STP
