

STREAM REPORT WRITER

Access operational information when and how you want to

A financial services firm may have all of the data it needs, but if users can't easily access the information, it isn't of any use. Yet too often a system is only available to IT groups or staff with technical knowledge, not the business people who need the information. And even when they do get access, the information may be spread across multiple processing systems or only available in specific formats.

SunGard's Stream Report Writer solution provides a user-friendly solution that business people can use to access and report on data from third-party and internal systems.

Stream Report Writer is built on SunGard's Stream solution, a vendor-neutral data management framework that normalizes and consolidates data from multiple sources to create a single stream of data. It helps financial services institutions manage market data, reference data and transactional data on an enterprise-wide basis in order to reduce cost and complexity.

This ability to produce reports based on consolidated data helps firms gain a more holistic view of their client data as well as internal information and activity.

Easy to Use

Stream Report Writer is designed to be flexible and user-friendly. Users can directly query and report on a wide variety of information from their operational systems. They can also design, modify and run a variety of reports on their own, without help from the IT group.

In addition, users can share reports via e-mail or through the Web, while Business Objects tools allow them to control access at an individual user level. Reports are available in multiple formats, including pdf, Microsoft Excel®, and HTML.

The data transmitted from each system is available to Stream Report Writer in real-time, so users always have the latest information at their fingertips. Staff can also access historical data for research, analysis or comparison purposes.

KEY ADVANTAGES OF STREAM REPORT WRITER:

- Uses industry leading technologies, including Oracle and Business Objects, to make it easy for end users to access information
- Provides access to information in a user-friendly manner that doesn't require technical knowledge
- Makes data available in real-time for the most up-to-date and accurate information
- Allows users to customize the design and access of reports, as well as schedule automatic updates of reports
- Controls access at an individual user level, ensuring that only relevant and permissioned users see the data

Stream Report Writer puts the power in your hands to access operational data when and how you want to.
